Sharad vanth
DevOps Engineer

Email : sharadvanthsai@gmail.com | Phone : +1 513-410-5522 | LinkedIn : https://www.linkedin.com/in/sharad-vanth/

SUMMARY

Results-driven Junior DevOps Engineer with a Master's in IT and hands-on experience in implementing efficient CI/CD pipelines, infrastructure automation, and cloud solutions. Proven ability to streamline processes, enhance system reliability, and collaborate effectively within cross-functional teams. Eager to contribute technical expertise and innovative solutions in a full-time role.

TECHNICAL SKILLS

- DevOps Technologies : Jenkins, Docker, Kubernetes, CI / CD, Microservices, Terraform, Ansible,
- Version Control : Git, GitHub
- Programming Languages: Python (Pandas, NumPy, Matplotlib, Scikit Learn), C , C#, Java
- Cloud Services : Microsoft Azure, Amazon Web Services
- Databases : MySQL, Postgre SQL
- Tools and Technologies : Postman Tool, HTML, Bootstrap, Microservices, Software Engineering

EDUCATION

- **University of Cincinnati - Master of Science, Information Technology Aug 2022 – Aug 2023 – Cincinnati, Ohio**
  Who always wants to learn something new, I choose to upskill myself in the field of IT by pursuing a master's degree.

- **G .Pulla Reddy Engineering College – Bachelor of Technology Aug 2017 – July 2021 - Andhra Pradesh, India**
  I developed an early interest in computers cause I'm a tech fanatic, which prompted me choose computer science and Engineering in my Undergrad.

CERTIFICATIONS

- Certified Microsoft Azure Administrator Associate.
- Machine Learning Workshop :
  - Attended a 2-day workshop on Machine Learning at IIT Hyderabad.
- Python Data-Structures and Data Processing Certifications :
  - Completed a certification course on Python Data-Structures, Retrieving, Processing, and Visualizing Data with Python on Coursera.
  - Participated in a 3-day workshop on Programming with Python at GPREC.
  - Completed the certification on Python in Internshala Trainings (Principles of Object-oriented Programming (OOP), Connecting to SQLite Database)
- Programming Languages Certification :
  - Successfully completed certifications in C, Java, and Python through the Spoken Tutorial Project in GPREC.
- Software Development Certifications :
  - Completed certifications in Agile, HTML, JavaScript, and Software Engineering through Udemy Learnings.

CO - CURRICULARS

- Attended Deep Learning workshop at G.Pulla Reddy Engineering College as a member of the club.
- Attended National Service Scheme (N.S.S) from our campus as a volunteer and participated in all regular activities.
- As a member of IT club, provided hands-on trainings for fellow students on different technologies.

PROFESSIONAL EXPERIENCE

Company : Fifth Third Bank **Sep 2023 – Till Date**
Role : DevOps Engineer

- Collaborated on the design and implementation of CI/CD pipelines using Docker, Kubernetes, and microservices, contributing to the efficient and automated deployment of web applications.
- Supported infrastructure as code initiatives using Terraform and Ansible, assisting in the creation of scalable and reproducible environments across Azure and AWS cloud platforms.
- Worked closely with senior team members to ensure the reliability and security of containerized solutions, gaining hands-on experience in best practices for deployment and maintenance.
- Contributed to the cultivation of a DevOps culture by actively participating in automation efforts, fostering a collaborative environment that prioritizes continuous integration and delivery.
- Assisted in troubleshooting and resolving deployment issues, honing skills in identifying and mitigating challenges to improve overall system stability.
- Played a key role in the projects by deploying the web applications, gaining exposure to cloud-based technologies, and contributing to the successful transition of applications to modernized environments.
- Actively engaged in professional development, staying informed about industry trends and technologies to enhance skills and bring fresh perspectives to the DevOps team.

Company : Cognizant, India **Sep 2021 – July 2022**
Role : DevOps Engineer

- Leveraged AWS cloud services, including CloudFormation templates, EKS, EC2, RDS, S3, IAM, and VPC, to guarantee the availability, security, and peak performance of cloud-hosted applications.
- Delivered proactive support and troubleshooting for AWS-based applications, swiftly addressing incidents, and upholding high service reliability standards for end-users.
- Automated deployment processes using tools like Ansible, ensuring consistent and reliable application deployments across environments.
- Collaborated with development teams in Agile environments, ensuring seamless integration of DevOps practices into the sprint cycle.
- Implemented Terraform scripts to provision and manage infrastructure on Azure, enhancing deployment speed and consistency.
- Worked closely with cross-functional teams to define infrastructure requirements for new projects, ensuring scalability from the outset.
- Streamlined application monitoring and logging using ELK Stack, improving real-time visibility into system performance.
- Orchestrated Docker containers in Kubernetes for a high-traffic e-commerce application, ensuring seamless scalability during peak periods.
- Implemented blue-green deployment strategies, ensuring zero downtime during application updates.
- I implemented automated CI/CD pipelines, scaling, and rolling updates, resulting in significant time and resource savings while ensuring high availability and resilience for our applications.
- Utilized Jenkins pipelines to automate the deployment of microservices, improving deployment consistency and reliability.
- Implemented Git branching strategies to facilitate parallel development efforts and maintain a clean code repository.

Environment : AWS, Maven, Docker, Kubernetes, Terraform, Ansible, Open shift

Company : Cognizant, India **Jan 2021 – July 2021**
Role : DevOps Analyst (Internship)

- Successfully assimilated into the DevOps culture during my internship at Cognizant, gaining a foundational understanding of collaboration and communication between development and operation teams.
- Spearheaded my role as a DevOps intern at Cognizant India, marking my debut in the field.
- Implemented and fine-tuned CI/CD pipelines, gaining practical exposure to deployment processes.

- Developed automation scripts to enhance operational efficiency and support project delivery.
- Collaborated effectively with cross-functional teams, troubleshooting issues, and contributing to a cohesive development environment.

Company : Sunshine Techno System, India **Feb 2020 – Aug 2020**
Role : Full Stack.NET (Internship)

- Worked as an PUC Intern and collaborated with the team for Mini – Project of developing an e-commerce portal using dotnet to create a responsive web pages using C#,ASP.net, Entity Framework, Docker Desktop, Kubernetes.
- As a team member uploaded the microservices to Azure (Cloud Concepts) through Docker Desktop, Kubernetes.
- Troubleshooting issues involved during the build and deployment of any application in SDP.
- I have hands-on experience with Front End HTML, CSS, and Cloud Concepts as a Full Stack developer in the Dot Net Track.
- Responsible to deploy the Docker images to the Azure Container.

Company : Sunshine Techno System, India **Aug 2019 – Jan 2020**
Role : Python Developer (Internship)

- Learned and applied fundamental Python concepts (Pandas, NumPy, Matplotlib) to contribute to simple coding tasks, gradually building a foundation in programming logic.
- Assisted in identifying and fixing basic bugs in Python scripts, gaining exposure to debugging techniques and error resolution.
- Explored introductory Python libraries to perform basic data manipulation tasks, acquiring a basic understanding of data processing in Python.
- Contributed to a small-scale Python project, working under guidance to understand basic software development practices and project structures.

Personal Projects

- **Capstone Project(Masters)**: Research paper
  Project: Investigating the potential benefits and challenges of Integrating AI with Cloud Computing
  Research Questions:
  - What are the potential benefits and challenges of integrating AI with cloud computing?
  - How can organizations optimize the integration of AI with Cloud computing to achieve maximum performance

  Conclusion: The fusion of artificial intelligence (AI) and cloud computing presents numerous advantages, such as cost savings and increased efficiency. Despite its potential in automating tasks like customer service and real-time data analysis, challenges like data security and ethical considerations must be addressed for optimal results. Successful integration involves enforcing resilient measures, establishing benchmarks, and prioritizing ethical principles at every stage.

- **Internship (STS):** Full Stack .NET
  Project: Retail Product Management
  Team size: 3
  Description: Developed a website that displays the products and their prices as images and each individual in team has created microservice and deployed through cloud and connected to database. User will login and search product by id/name and check its availability then proceed to add to cart or Wishlist then log out.

- **Internship (STS):** Python 3.6v
  Project: De -Blurring of Images Using GAN (Generative Adversarial Networks)
  Team size :3
  Description: Developed a model based on deep learning solutions. We have designed an algorithm which will sharpen the images by using Gan. Generator and Discriminator are the two main methods whereas generator generates the sharper image and discriminator tries to find the differences between

generated image and target image.

- **Personal Project**: Machine Learning
  Project: Image Steganography
  Team size: 3
  Description: Developed a GUI which is used to hide the information. Steganography is an art of hiding the information. The secret message is embedded into a graphic file and the embedded message can be extracted. Here textual message is embedded and extracted using the LSB (least significant bit) Technique is used.
