# Sharad Vanth

**DevOps Engineer**

Phone: +1 5134105522

Email: sharadvanthsai@gmail.com | Linkedin | GitHub

## TECHNICAL SKILLS

- **DevOps Technologies**: Jenkins, Maven, Ant, Docker, Kubernetes, CI / CD, Microservices, Terraform, Helm, Ansible, YAML, Apache Tomcat, Bash, Shell Scripting.
- **Security**: SonarQube, Owasp Dependency Check, Trivy
- **Programming Languages:** Python, C#.
- **OS**: Linux, CentOS 6, Ubuntu
- **Databases:** MySQL, PostgreSQL , Mongodb, Redis
- **Containerization & Orchestration Tools:** Docker, Kubernetes, AKS.
- **Cloud Services:** Amazon Web Services, Microsoft Azure.
- **Version Control:** Git, GitHub.

## WORK EXPERIENCE

**Company: Maxil Technology** **May 2024 – Till Date**
**Role: DevOps Engineer**

- Managed the Maxjobs SAAS product on AWS, reducing manual effort by 40% through implementing Jenkins for CI/CD, automating routine tasks, and using Ansible for configuration management. This led to a 30% increase in operational efficiency.
- Enhanced application deployment and scalability by 50% using Docker for containerization and Kubernetes for orchestration. Improved monitoring by 40% with Prometheus and Grafana and streamlined team collaboration by 30% with Git and GitHub for version control.

**Company: Fifth Third** **Sep 2023 – April 2024**
**Role: DevOps Engineer**

- Implemented Azure Services such as Entra ID (AAD), Azure VM, Azure Virtual Networks, Azure Resource Manager, SQL Database, Azure Service Principal, Azure App Service, Azure Blob Storage, Azure Container Registry, Azure Kubernetes Service.
- To reduce manual effort, enhance operational efficiency, ensure consistent configurations, and enable faster deployment of infrastructure resources, I automated infrastructure provisioning using tools like Terraform.
- Developed automation scripting using Ansible-playbooks to deploy and manage Java applications across Linux servers. Using Ansible deployed web applications to K8's. Involved in writing the ansible playbooks for installing docker in multiple nodes.
- Developed CI/CD pipelines with Jenkins to automate the software development lifecycle (SDLC) processes and integrated SonarQube for static application security testing (SAST) to enhance DevSecOps practices.
- I automated routine tasks using shell scripting, resulting in a 30% reduction in manual effort and a notable increase in operational efficiency.

**Company: Cognizant** **Jan 2021 – July 2022**
**Role: DevOps Engineer**

- Leveraged AWS cloud services, including CloudFormation templates, EKS, EC2, RDS, S3, IAM, and VPC, to guarantee the availability, security, and peak performance of AWS cloud-hosted applications.
- Ensured reliable data backup and integration in our CI/CD pipeline by implementing automated backups using versioned AWS S3 buckets, resulting in a 30% reduction in backup errors and enhanced deployment efficiency.
- Implemented Terraform to automate AWS infrastructure deployment, defining resources like EC2 instances and VPCs as code, reducing provisioning time by 50% and minimizing deployment errors by 75%, ensuring consistent configuration and enabling rapid scalability.
- Deployed Ansible to ensure consistent configuration and installation of critical tools (Jenkins, kubectl, Java) across nodes, ensuring reliable deployments. This implementation reduced deployment time by 40% without compromising performance standards.
- Transitioned from manual Docker deployments to automated Kubernetes deployments using Helm charts, reducing operational errors and improving scalability. Achieved 40% faster release cycles and enhanced reliability in handling peak traffic.

- Implemented a Jenkins-based CI/CD pipeline integrating with tools (Maven) for secure Kubernetes deployments. Monitored system metrics using Prometheus and Grafana in Jenkins, reducing deployment time by 40% and enhancing security and system stability, resulting in a 30% decrease in incident response time.
- Identified and resolved the lack of real-time monitoring and alerting by implementing Prometheus and Grafana. Set up alerts for CPU usage exceeding 80% and application downtime over 5 minutes, with notifications sent to the team via Slack/Email, improving response times and system reliability.
- Implemented blue-green deployment strategies, ensuring zero downtime during application updates.

**Company: Sunshine Techno Systems** **Aug 2019 – Aug 2020**
**Role: Software Engineer**

- Collaborated on e-commerce project using C#, ASP.NET, Entity Framework, Docker Desktop, and Kubernetes to develop responsive web pages.
- Uploaded microservices to Azure using Docker Desktop and Kubernetes, troubleshooting build and deployment issues in Software Development Process.
- Deployed Docker images to Azure Containers, gaining hands-on experience in HTML/CSS front-end development and basic Python programming for data manipulation and debugging.

## PROJECTS

- Multi-Tier WebApp Deployment Automation [GitHub]
  - Automated CI/CD workflows with Jenkins, integrating Maven and JDK for Java projects, using Terraform for infrastructure setup and Ansible for Docker and Kubernetes configuration. Implemented SonarQube for code quality checks and OWASP Dependency-Check for vulnerability scans.
  - Deployed artifacts to JFrog, built and scanned Docker images with Trivy, deployed to Docker Hub Registry, and managed deployments on Kubernetes. Monitored applications using Prometheus, Grafana, and Blackbox Exporter.
  - Enhanced team efficiency, reducing time-to-market for new features and updates, improving artifact deployment efficiency by 25%, and accelerating the feature deployment cycle by 50%.

- Multibranch_E-commerce Microservice Application [GitHub]
  - Designed and implemented a robust CI/CD pipeline using Jenkins for a sophisticated multi-branch microservices web application, reducing deployment times by 40% and ensuring 95% successful deployments.
  - Leveraged Docker and Docker files to optimize containerized images, achieving a 30% reduction in image size and pushing them to DockerHub repositories. Orchestrated deployments onto managed Kubernetes clusters via Azure Kubernetes Service (AKS), improving scalability and resource utilization by 50%.
  - Orchestrated infrastructure provisioning using Terraform, automating setup and achieving a 60% reduction in deployment errors. Integrated GitHub webhooks, reducing release cycle times by 35% and ensuring synchronization between development and deployment phases.

## CERTIFICATIONS

- Microsoft Azure Fundamentals
- Microsoft Azure Administrator Associate
- AWS Cloud Quest
- Achieved certification in Python Data-Structures, Retrieving, Processing on Coursera
- Achieved certifications in DevOps, CI/CD, Jenkins through LinkedinLearnings
- Completed Certifications in Git, Linux, Docker, Kubernetes, DevOps, Terraform, Ansible on KodeKloud

## EDUCATION

**University of Cincinnati, Master of Science, Information Technology | Cincinnati, OH** **Aug 2023**
**Relevant Courses (** Principles of Cybersecurity, Cloud Computing, Data-driven Insights, System Administration.)
**G. Pulla Reddy Engineering College, Computer Science and Engineering | Andhra Pradesh, India** **July 2021**
